

2026 Release Notes

2026 July Release

What's new

Payroll NOW version

Base App: 28.52.2.24

PN Extension: 28.52.2.34

This version was tested on Primo 28.52.2.0. This version of Payroll NOW is compatible with Primo Payroll Base app version 28.52.0.0 and greater, and Business Central version 28.0 in addition to a few new features combined with Integrity Data HR, Polling issues and features. Below is a summary of each.

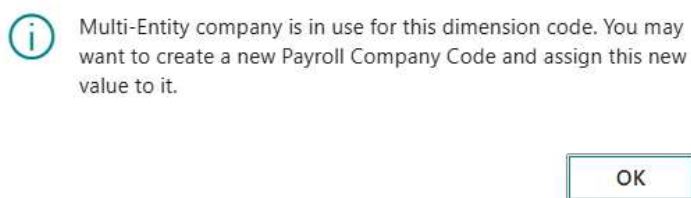

New Features / Improvements

- **New Hire Reporting Phase 1**
 - The State New Hire Reporting feature in Payroll NOW automates the process of notifying state agencies when an employer hires or rehires an employee. Federal law (Personal Responsibility and Work Opportunity Reconciliation Act, PRWORA) requires all employers to report newly hired and rehired employees to a state directory within a defined window after the employee's first day of work. States use this data to enforce child support orders and manage unemployment insurance.
- **Greater Visibility into Integration Errors**
 - Polling Staging page — see every polling transaction BC has received from the middleware, with its type (Employee, Position Type, Pay Group Type, etc.), value (employee number, position code, etc.), status, and any error message
 - Reach it from the Payroll Tax Release Setup page (Polling Staging button), or from notifications when there are errors
 - Default view shows the last two weeks of activity — clear the Created From date to see older records
 - Filters at the top of the page: Errors Only, Type, Value (wildcard search), and Created From
 - Errors are highlighted — Fail and Retry show in red, Partial in yellow, Success in green
 - Sortable columns — click any column header to sort or filter further
 - Ignore checkbox — mark a record as Ignored to visually dim it on the list and stop it from triggering error notifications; uncheck it later to bring it back to attention
 - Ignore All button — set Ignore on every record currently visible in the filtered view
 - Error Messages drill-down — select a record and click Error Messages to see the detailed error log entries for just that record
 - Notifications appear when there are polling records with errors:
 - On the Solution Menu and Payroll Activities pages — total count across the company
 - On a Payroll Employee Card — count for just that employee
 - Each notification has an Open Staging button that takes you straight to the filtered list

- **New Federal 2026 amount for Qualifying Children Under 17**
 - Previously, employees entered the total dollar amount representing all qualifying dependents directly into the HR system (e.g., an employee with 2 children under 17 would enter \$4,400). The integration passed this lump-sum value to payroll, which used it as-is for withholding calculations.
 - The integration has been updated to reflect a revised data flow:
 - Employees now enter the per-dependent election amount multiplied by the number of qualifying dependents under age 17.
 - The HR system passes this total election amount to payroll.
 - Payroll then calculates the actual number of dependents and the total election based on the current IRS credit value.

Payroll NOW Issues Resolved

- (14041) - Direct Deposit Employee is still set to YES when all DD distributions are removed – Resolved. When Employees remove all of their direct deposit accounts Direct Deposit Employee toggle is turned off and employee will be set to receive a check.
- (14284) – MEM Integration Insert trigger. Resolved. Updated the message to the following:

- (14125) – Void Checks visible in HR. Resolved. Void checks are no longer visible to employees in HR.
- (18008) - EmployeeDeductions API has an issue with setting the override to a Vendor Account. Resolved.

Polling From HRP to PN

- (14306) – Employee API for Position Effective Date = On – was defaulting to hire date or rehire date. Resolved.
- (14250) – Need to support the Earnings 60 Paystub with our API. Resolved.
- (14646) - Benefit plans setup - If a polling record does not have an employer contribution code and employee deduction code ignore. Resolved.
- (18063) – Changing Pay Types and rates for same effective date was not updating Payroll correctly. Resolved.
- (18022) – HR Pay types with leading spaces were failing during polling. Resolved. Leading and trailing spaces are now truncated.

Payroll Tax Filing Issues resolved

- No Issues reported for resolution

2026 April Release

Payroll NOW Issues Resolved

- No known issues at this time

Polling Issues between HRP and Payroll NOW

- Resolved - In some cases Direct Deposit details were setting the prenote flag to Yes in PayrollNow when making edits in HR.
- Resolved – In some cases Direct Deposits were setting a start and end date resulting in errors when processing payroll
- Resolved – Editing information for a terminated employee was causing the employee to become unblocked in PayrollNow
- Resolved – Support for Pay Statements using alternate Pay Statement Report in PayrollNow in HR Pay History

Synchronization Issues between Payroll NOW and HR

- Resolved – Job Queue errors out on sync process during high volumes. Added batch controls to improve performance.
